

# P30 CM

The safest way to train.

The P30 CM is a 11.4 mm calibre, compressed air operated, pollutant free, marker weapon. It offers law enforcement users an extremely effective training tool for realistic simulation of operational scenarios. The P30 CM fires gelatin capsules filled with food dye out to realistic engagement distances. The marker rounds present no health hazard, the dye is easily washable and completely biodegradable. Thanks to the low energy density of the marker rounds, risk of injury is virtually non-existent, even with minimal protective equipment.
